A safety net, not a guarantee. Toyamato Account Guardian can only act while MetaTrader is running and connected. It closes positions at the market price, which can be worse than your limit during gaps, high volatility or news. It reduces risk but cannot prevent losses.

1. What it does

Toyamato Account Guardian is a free protection EA for MetaTrader 4 and MetaTrader 5. **It never opens a trade.** It watches the whole account on every tick and closes **every open position of the account** – opened by any robot or by hand, on any symbol – when one of its two limits is reached. Optionally it also deletes all pending orders. It needs no license key and is free for everyone.

Every robot only watches its own trades. If you run several robots or several charts, or trade by hand next to a robot, nothing watches the account as a whole. The Guardian is this last line of defence – the ideal partner for Toyamato X EA on several charts.

2. Installation (MT4 / MT5)

1. In MetaTrader click *File > Open Data Folder*.
2. Copy the file into `MQL4\Experts` (MT4, `.ex4`) or `MQL5\Experts` (MT5, `.ex5`).
3. Restart MetaTrader or choose *Refresh* in the Navigator.
4. Turn on *AutoTrading* (MT4) or *Algo Trading* (MT5) – the Guardian needs it to close positions.
5. Drag it onto **one** chart of the account (any symbol), allow live / algo trading and press OK.
6. For push notifications connect the MetaTrader mobile app (*Tools > Options > Notifications*, MetaQuotes ID).

Run only **one** Guardian per account. It protects the whole account from a single chart.

3. The two protection layers

Layer 1 - Max equity drawdown (peak-to-trough)

The Guardian follows the **highest equity** the account has reached and updates it on every tick. If the equity falls more than `Max_Equity_DD_Percent` (default 25%) below this peak, it closes everything. The peak is saved, so it survives a restart of MetaTrader.

Example: the peak equity is 1,000 USD and the limit is 25%. When the equity falls to 750 USD, the Guardian closes all positions.

Layer 2 - Floating loss stop

This layer compares the current floating loss with the balance: $(\text{balance} - \text{equity}) / \text{balance}$. If it reaches `Percentage_Stop_Percent` (default 20%), the Guardian closes everything. It catches a sudden large loss of the positions that are open right now, independently of the peak.

Example: the balance is 1,000 USD and the limit is 20%. When the open positions show a loss of 200 USD (equity 800 USD), the Guardian closes all positions.

4. What happens when it acts

1. It closes all open market positions of the account (`Close_All_Positions`) and, if set, deletes all pending orders (`Delete_All_Pending`).
2. It sends an alert: pop-up, sound and push notification to your phone, with the reason and the values.
3. If a position cannot be closed (for example the market is closed), it retries a limited number of times with a short pause, so you are not flooded with alerts, and reports the problem on the panel.
4. After the close it sets the peak to the new equity, so it does not trigger again on the same event.

Other robots may open new trades after the Guardian has closed everything. If you want trading to stop after a trigger, switch off the other robots or AutoTrading.

5. Deposits and withdrawals

- **Deposit:** the equity rises, so the peak rises automatically.
- **Withdrawal:** the equity falls without any trade loss. The Guardian recognises a balance drop that does not come from a closed trade and resets the peak to the current equity (`Auto_Reset_On-Withdrawal`), so a withdrawal does not count as drawdown.
- **Manual reset:** set `Reset_Peak_Now = true` and press OK – the peak is set to the current equity once, and the setting switches itself back off.

6. The panel

The panel shows the status, balance and equity, the saved peak, the current drawdown from the peak with its limit, the current floating loss with its limit, and the time of the last trigger. Values turn red when they come close to the limit (70%). The panel is available in 14 languages (`UI_Language`), English by default.

7. All settings

Setting	Default	What it does
UI_Language	English	Language of the panel and messages (14 languages).
Max_Equity_DD_Active	true	Layer 1 on/off.
Max_Equity_DD_Percent	25.0	Maximum fall from the equity peak in %. Above this, everything is closed.
Percentage_Stop_Active	true	Layer 2 on/off.
Percentage_Stop_Percent	20.0	Maximum floating loss compared with the balance in %.
Close_All_Positions	true	Close all open positions of the account when triggered.
Delete_All_Pending	true	Also delete all pending orders.
Auto_Reset_On-Withdrawal	true	Reset the peak automatically after a withdrawal.
Reset_Peak_Now	false	Set to true once to reset the peak to the current equity.
Send_Push_Notification	true	Push notification to the MetaTrader mobile app.
Send_Alert_Popup	true	Pop-up window in the terminal.
Play_Sound_Alert	true	Sound when triggered.
Panel_Megjelenites, Show_Logo	true, true	Panel and logo on the chart.

8. Good practice

1. Set the Guardian's limits **tighter than** what you could bear, and looser than the normal drawdown of your robots, so it acts only in a real emergency.
2. Test it on a demo account first: open a few trades and use small limits to see it act.
3. Run it on a VPS together with your robots, so it watches the account 24 hours a day.
4. Check the panel after every restart: the peak should match your expectation.

Support

Questions: **toyamatoforexworld@gmail.com**. Videos: **youtube.com/@Forexrobots-indicators-Tester**.

Donations on the website are voluntary and have no connection to any purchase. A donation does not buy a product, a license, a discount, support or any service.

9. Limits and risk warning

The Guardian works only while MetaTrader is running, connected and allowed to trade. During gaps, weekends, high volatility or news the close can happen at a much worse price than the limit. It cannot protect against losses that happen while MetaTrader is closed or offline.

Trading foreign exchange (forex) and CFDs on margin carries a high level of risk and may not be suitable for all investors. Leverage can work against you as well as for you, and you may lose some or all of your capital.

The software is provided "as is", without any warranty. There is no guarantee of profit, of any trading result, of loss prevention or of error-free operation. Backtests and demo results are based on historical or simulated trading and do not guarantee future results. Broker execution, spreads, slippage, swaps, internet and computer problems can all affect results.

Nothing in this manual is financial, investment or tax advice. You install, set up and run the software yourself on your own account, and you alone are responsible for your trading decisions. To the maximum extent permitted by law, the author is not liable for any loss or damage arising from the use of the software or this manual. Read the full Risk warning on ToyamatoForexWorld.com.

10. End User License Agreement (EULA)

1. Parties and scope

This End User License Agreement ("EULA") is an agreement between you ("the user") and the author of the Toyamato software ("the author", Toyamato Forex World, contact: toyamatoforexworld@gmail.com). It applies to Toyamato X EA, Toyamato Breakout Zone, Toyamato Helper and Toyamato Account Guardian, including the demo versions, the PDF manuals and any updates (together "the software"). By downloading, installing or using the software you accept this EULA. If you do not accept it, do not install or use the software.

2. Purchase

The paid versions are sold through Gumroad, which acts as the seller (merchant of record) and handles the payment, the invoice and the applicable VAT under its own terms. This EULA governs the use of the software itself.

3. License grant

For a paid version, the author grants you a personal, non-exclusive, non-transferable, non-sublicensable and perpetual license to use the software on the **2 MetaTrader account numbers** (live or demo) that you entered at checkout. You may run it on any number of charts of these 2 accounts and on any number of your own computers or VPS. **The 2 account numbers cannot be changed later; a different account requires a new license.** The license key is personal and must be kept confidential.

The demo versions may be used free of charge for 10 days on any account and without time limit in the Strategy Tester, for evaluation only. Toyamato Helper and Toyamato Account Guardian may be used free of charge on any account.

4. Restrictions

You may not: share, publish, sell, rent, lend or give away the software, the license key or the download links; use the software on accounts other than the licensed ones; decompile, disassemble, reverse engineer, modify or create derivative works of the software, or remove or bypass the license check or the demo limits; or use the software in any way that breaks the law or the terms of your broker. Free tools may be shared only in the original, unchanged form as downloaded from ToyamatoForexWorld.com.

5. Ownership

The software is licensed, not sold. All rights, title and copyright in the software, the manuals, the logos and the name "Toyamato" remain with the author. Everything not expressly granted in this EULA is reserved.

6. Online license check

The paid software checks the license key online at Gumroad when it starts and once a day, and compares your MetaTrader account number with the account numbers stored with your purchase. For the indicator, this check is done by the free Toyamato Helper. An internet connection and the

WebRequest permission in MetaTrader are required. See the Privacy policy (toyamatoforexworld.com/privacy.html).

7. Updates and support

Updates, new versions and support are provided at the author's discretion and are not guaranteed. The author may change or discontinue the software at any time.

8. Refund

A 7-day refund applies if the software does not work technically on your MetaTrader (an installation or activation problem that cannot be solved together, or the wrong platform purchased). Trading results and losses, and wrongly entered account numbers, are not a reason for a refund. When a refund is issued, the license key is deactivated. Your statutory consumer rights are not affected.

9. Risk and no advice

Trading forex and CFDs involves a high risk of loss. The software is a tool, not a holy grail, and not financial advice. Backtests and demo results do not guarantee future results. You alone are responsible for your settings, your trading decisions and their results. Read the Risk warning & disclaimer (toyamatoforexworld.com/risk-warning.html), which forms part of this EULA.

10. No warranty

To the maximum extent permitted by law, the software is provided “as is” and “as available”, without any warranty of any kind, express or implied, including merchantability, fitness for a particular purpose, accuracy, uninterrupted or error-free operation.

11. Limitation of liability

To the maximum extent permitted by law, the author is not liable for any direct, indirect, incidental, consequential or special loss or damage, including trading losses, lost profits or lost data, arising from the use of or the inability to use the software. Where liability cannot be excluded, it is limited to the price you paid for the license. Nothing in this EULA limits liability that cannot be limited under the applicable law, including liability for intent or gross negligence and mandatory consumer rights.

12. Termination

This license ends automatically if you break this EULA or if the purchase is refunded or charged back. The license key can then be deactivated, and you must stop using and delete the software.

13. Applicable law

This EULA is governed by the law of Hungary. If you are a consumer, you also keep the protection of the mandatory rules of the country where you live. If any part of this EULA is invalid, the rest remains in force.

14. Contact
